Graphics Guidelines for Content Authored in Xyleme

- For full details, see VMware ILT Content Creation > Working with Graphics in Xyleme in <https://vmware.bravais.com/s/J4MSWy60YT5uace6X6i6>.
- Create diagrams as SVG files to ensure that text remains editable. Use Powerpoint and Inkscape to create diagrams.
See Useful Tools and Plug-Ins > Using Inkscape to Create Graphics in <https://vmware.bravais.com/s/J4MSWy60YT5uace6X6i6>
- Save screenshots or any other images as PNG files at maximum 120dpi.
- Images should be restricted to the following sizes:
- 800 pixels wide for full screenshots | 600 pixels wide for partial screenshots
- 400 pixels wide for dialog boxes | 200 pixels wide for standalone icons or logos.
- Do not use the Image Overlay feature in Xyleme Create to add text.
- Crop images closely. Do not add any extra whitespace surrounding your graphic.
This will ensure that the graphic appears correctly in every output.
- Do not add image frames or outlines.
- Follow the file naming guidelines in VMware ILT Content Creation > Working with Graphics in Xyleme) Best Practice
› Saving Images <https://vmware.bravais.com/s/J4MSWy60YT5uace6X6i6>.
- Provide succinct filenames without spaces or special characters (for example, ?, @, #, \$, %, &, * and +)
- Use SnagIt to take screenshots (pending budget approval).

Image Conversion

Selecting the appropriate image for SVG conversion

Image needs to be converted as SVG

- Screenshot with Text
- PNG images with editable text (i.e., callouts)

Cross-VC NSX Architecture

Image doesn't need to be converted

- Screenshot with highlight and no Text
- Table

The screenshot shows the 'New Datastore Cluster' dialog box with the 'Storage DRS Runtime Settings' tab selected. The settings include:

- I/O Metric inclusion:** ☒ Enable I/O metric for SDRS recommendations. Select this option if you want I/O metrics considered as a part of any SDRS recommendations or automated migrations in this data store cluster.
- I/O latency threshold:** Dictates the minimum I/O latency for each datastore below which I/O load balancing moves are not considered. The slider is set to 15 ms (range: 5 ms to 100 ms).
- Space threshold:** Runtime thresholds govern when Storage DRS performs or recommends migrations (based on the selected automation level). The 'Utilized space' radio button is selected, with the slider set to 80% (range: 50% to 100%). The 'Minimum free space' radio button is unselected, with the value set to 1 GB.

Buttons at the bottom: CANCEL, BACK, NEXT.
