OFX – SIT EXECUTION

WEEKLY UPDATE

January 12th, 2018

WHAT IS WEB AND MOBILE ANALYTICS

Web and mobile analytics is the process of **collecting & analyzing user behavior data** on a web site or a mobile app to enable **data driven decision making** with the ultimate aim of **enhancing the targeted business goals**.

KEY WORK STREAMS AND BUSINESS OUTCOMES

Work streams

User Behavior Analysis

- Page flow and journey analysis
- Customer segmentation
- Return user behavior

Use visitor behavior data to **optimize user experience** and identify potential ways to **increase engagement and conversion**.

Campaign Analysis

- Campaign performance
- Campaign quality & engagement

Report campaign clicks & conversion and help to improve **quality of campaigns**.

Marketing Optimization

- Channel attribution
- Target achievement

Reallocating the channels cost to improve **Return on Investment**.

Offline Data Merger

- Streamline data gathering
- Integrate from 3rd party tools
- Surveys and call centers data

Provide a **single point of access** for all data to generate advanced reports.

Work streams

CENTER OF EXCELLENCE

Based out of **Gurgaon** delivery center of IDC, the Web Analytics CoE is a group of co-located experts delivering and providing SME support services.

The CoE staffs Web Analytics professionals with **deep technical expertise** combined with domain experience spanning across **multiple industries**.

The CoE can be leveraged to help clients understand the behavior of their customers on the website & apps to help them make **insight driven decisions**.

CORE OFFERINGS

*KPI = Key Performance Indicators

TECHNICAL COMPETENCIES

Web / Mobile Analytics

Solutions & services for digital analytics setup, insight generation and data integrations with digital marketing technologies.

Adobe Analytics

Google Analytics

Coremetrics
An IBM Company

Customer Experience Management

Solutions to track, oversee and organize every interaction between a customer and the organization throughout the customer lifecycle

tealeaf
an IBM Company

clicktale
converting behavior to business

Optimization

Tools and services to optimize the tailoring of content, design, & behaviors of digital web pages and mobile apps

Adobe Target

Tag Management

Tools to manage the lifecycle of e-marketing tags used to integrate third-party software into digital properties.

Adobe DTM

Google Tag Manager

TEALIUM

CASE STUDY I International cigarette and tobacco company

DTM/Adobe Analytics Solution Implementation

Overview

- Client didn't have clear visibility of the visitor journey of their website – existing Adobe implementation was giving only OOB reporting.
- Accenture Consulting team proposed new Analytics implementation on their 4 brand websites to empower client with more in depth analysis of the customer behavior.

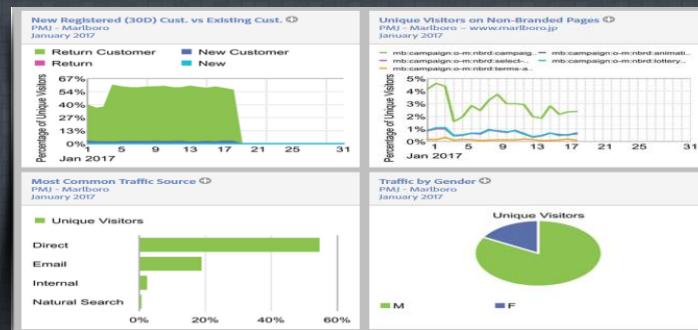

Solution

- Detailed requirement gathering and KPI framework creation
- Solution design created.
- Detailed tagging instructions provided to Dev team to capture relevant data
- Exhaustive UAT completed to verify all scenarios working fine and firing correct tags

Value Delivered

DTM/Adobe Analytics solution was implemented:

- Four client sites were implemented with Analytics solution successfully
- UAT was done successfully with client signoff
- Documentation of all the work was created

CASE STUDY II Top US Toy Manufacturing Company

Tealium Tag Manager & IBM Coremetrics Solution Implementation

Overview

- The Analytics solution – IBM CoreMetrics was to be designed and growing number of Tags needs to be shifted to Tealium Tag Management System with better control on tagging
- Another objective was to have E-Commerce implementation of Analytics and giving the control of tagging changes to client teams and allowing them to make changes independent of periodic code build

Solution

- Detailed POC was completed to gauge feasibility of tagging requirements for different scenarios
- Detailed tagging instructions provided to Dev team to capture relevant data points from the web pages
- Exhaustive UAT completed to verify all scenarios working fine and firing correct tags

Value Delivered

Tealium/IBM Coremetrics solution was implemented

- IBM Coremetrics/Tealium tagging solution for multiple bands and countries websites
- Tagging/variables mapping as per global and multibrand reporting requirements
- Four Client sites were implemented with Analytics solution successfully

CASE STUDY III Top US Telecom Company

Adobe analytics reporting and analysis

Overview

- The Analytics solution – Adobe Analytics was to be designed and growing number of Tags need to be shifted to Ensighten Tag Management System with better control on tagging.
- The ask at hand was to create automated excel dashboards for the leadership team to have more visibility on the site performance.

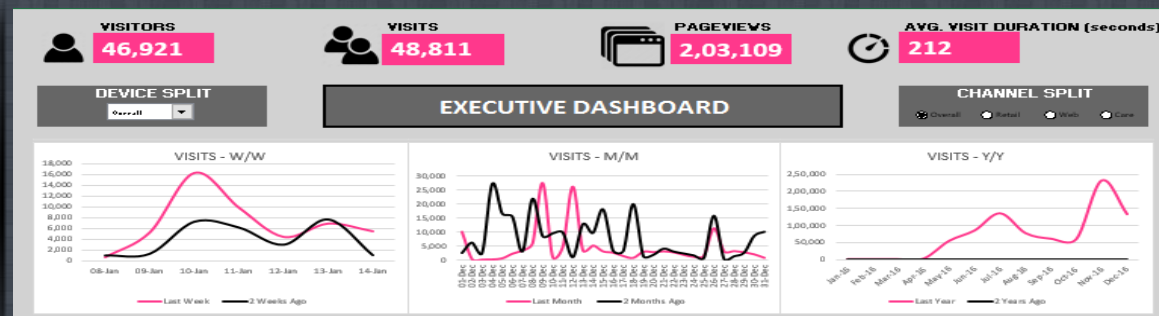

Solution

- Detailed POC was completed to gauge intact analytics tracking on the website, create visitors' journey mapping and walkthrough of different user flows.
- Adobe Report Builder was used to automate the dashboards with multiple granularities at Device Type and Channel split level.

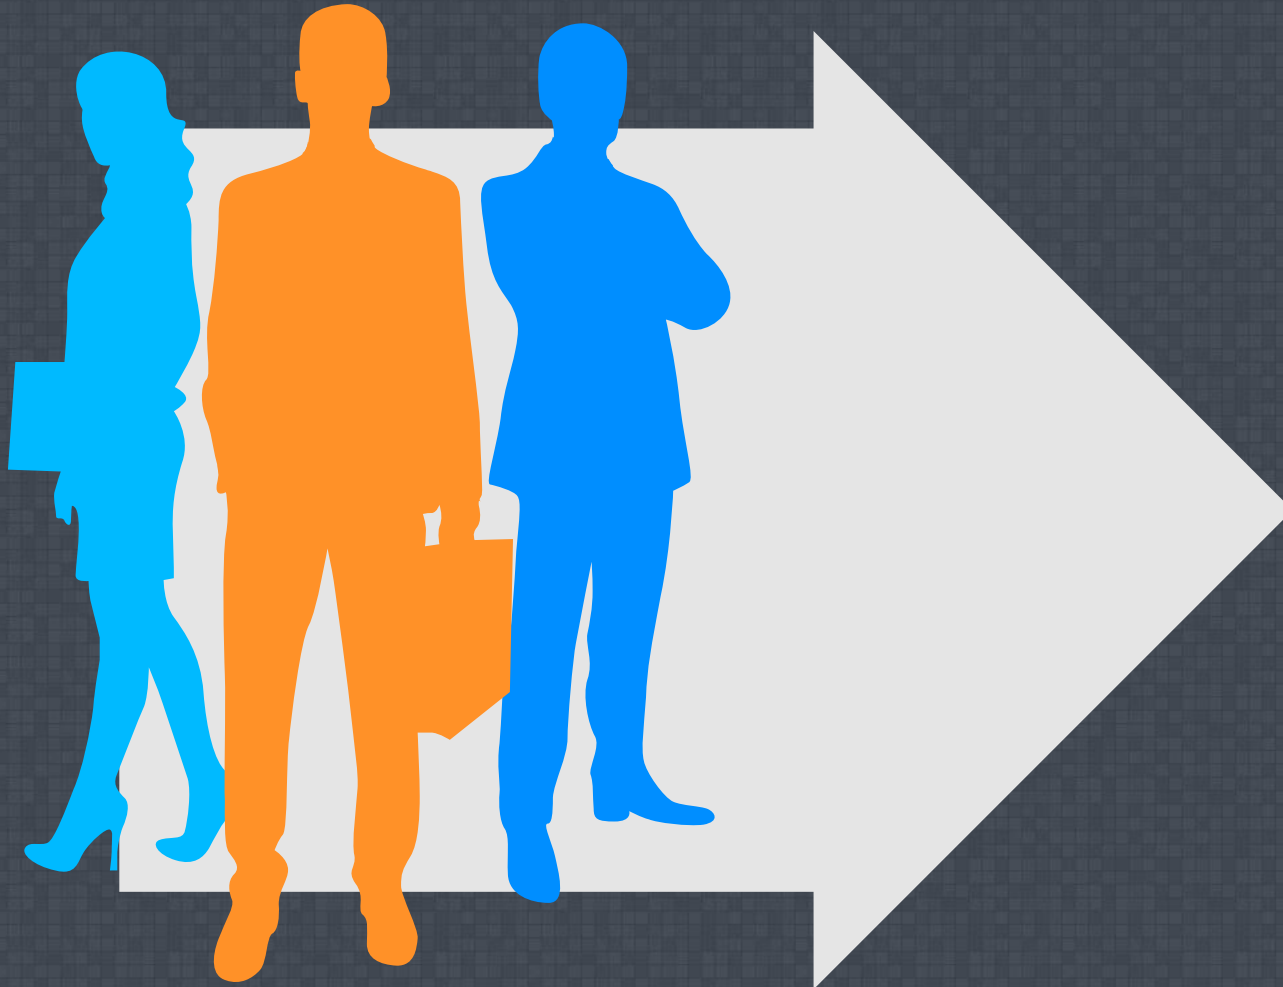

Value Delivered

Automated dashboards were created

- Detailed POC was completed to gauge intact analytics tracking on the website, create visitors' journey mapping and walkthrough of different user flows.
- Adobe Report Builder was used to automate the dashboards with multiple granularities at Device Type and Channel split level.
