ARFT JOURNEY

VISION - ONE AR SOLUTION

Sweden

- Country – Sweden
- Market – Mobile and Broadband
- Process – Billing, Payment and Dunning
- Potential
- **Potentail Benefit/Savings** – This project aims to save **30MSEK approx.** cost for Telia Sweden.

All Markets

- Country – Sweden, Denmark, Norway, Finland, Estonia, Latvia and Lithuania
- Market – Hardware Sales, Online channel Sales and Cloud Services
- Process – Billing, Payment and Dunning
- Potential
- **Benefit/Savings** – This project aims to save **25MSEK approx.**

One Account
One AR Solution across
Telia Business

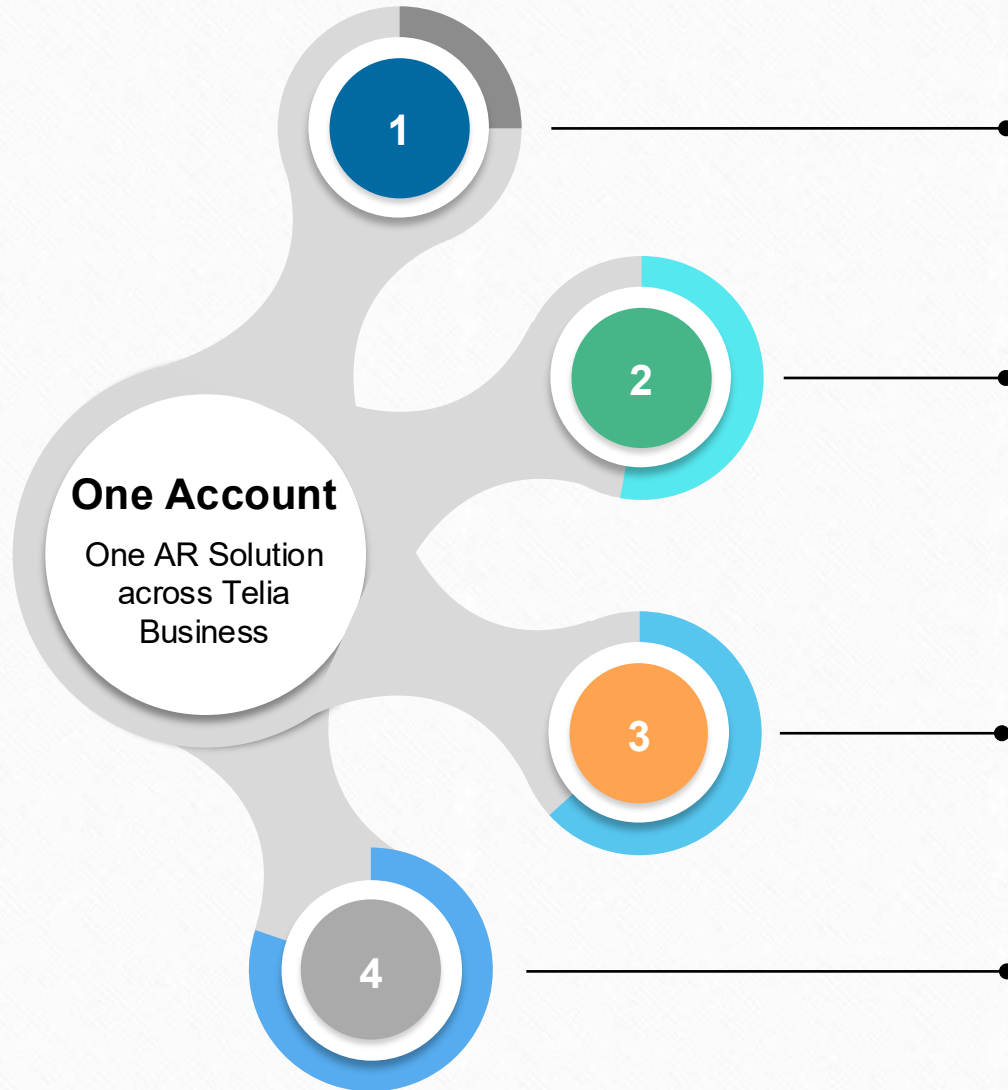

All Countries

- Country – Denmark, Norway, Finland, Estonia, Latvia and Lithuania
- Market – Mobile and Broadband
- Process – Billing, Payment and Dunning
- Potential
- **Benefit/Savings** – This project aims to save **20MSEK approx.**

One Collection – All Countries

- Country – Sweden, Denmark, Norway, Finland, Estonia, Latvia and Lithuania
- Market – Mobile, Broadband, Hardware Sales, Online channel Sales and Cloud Services
- Process - Collection

SYSTEM IDENTIFIED FOR ROLL OUT

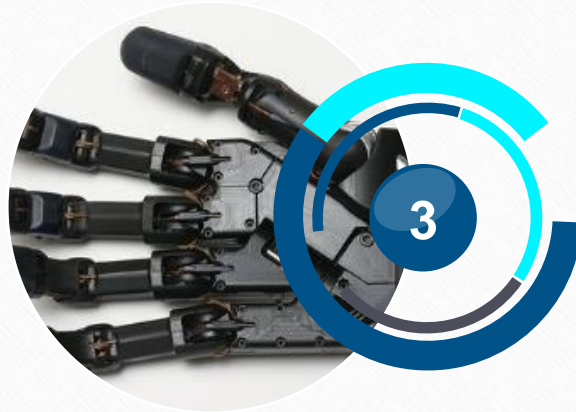

One AR solution roll out will target to replace legacy ** AR solution in different countries

ROBOTICS ADOPTION

Automated monitoring for critical flows
(BluePrism)

Mass PO creation with multiple items
(Accenture Cognitive Robotic Solution)

VIRTUAL ASSISTANT

Telia account consist of more than 100 team members and due to the increase in communication coordinates, complexities rises multiple fold. Objective is to enable all the members with the needed information on their tips instead of any human dependencies. There are various critical process like major incident communication, Escalation matrix, Organization structure, Skeletal support communication, Known error database search, Vacation calendar, Favorite URLs, 3rd Party POCs, which can be streamlined

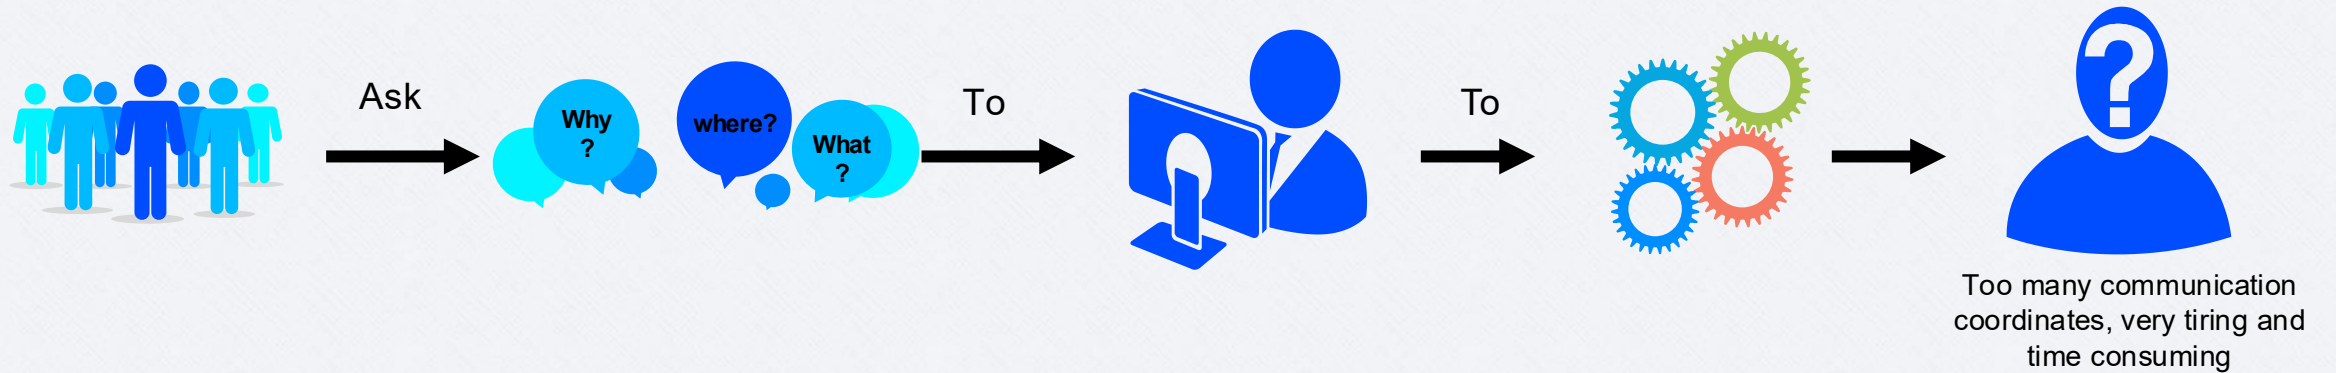

ROBOTICS SOLUTION

We have developed based Virtual Assistant (IKEBANA). This Digital service can hold natural sounding conversations with team members with the aim of accomplishing particular tasks, such as answering questions or enabling them to invoke critical process like Major incident communication, Skeletal support, Knowledge search etc.

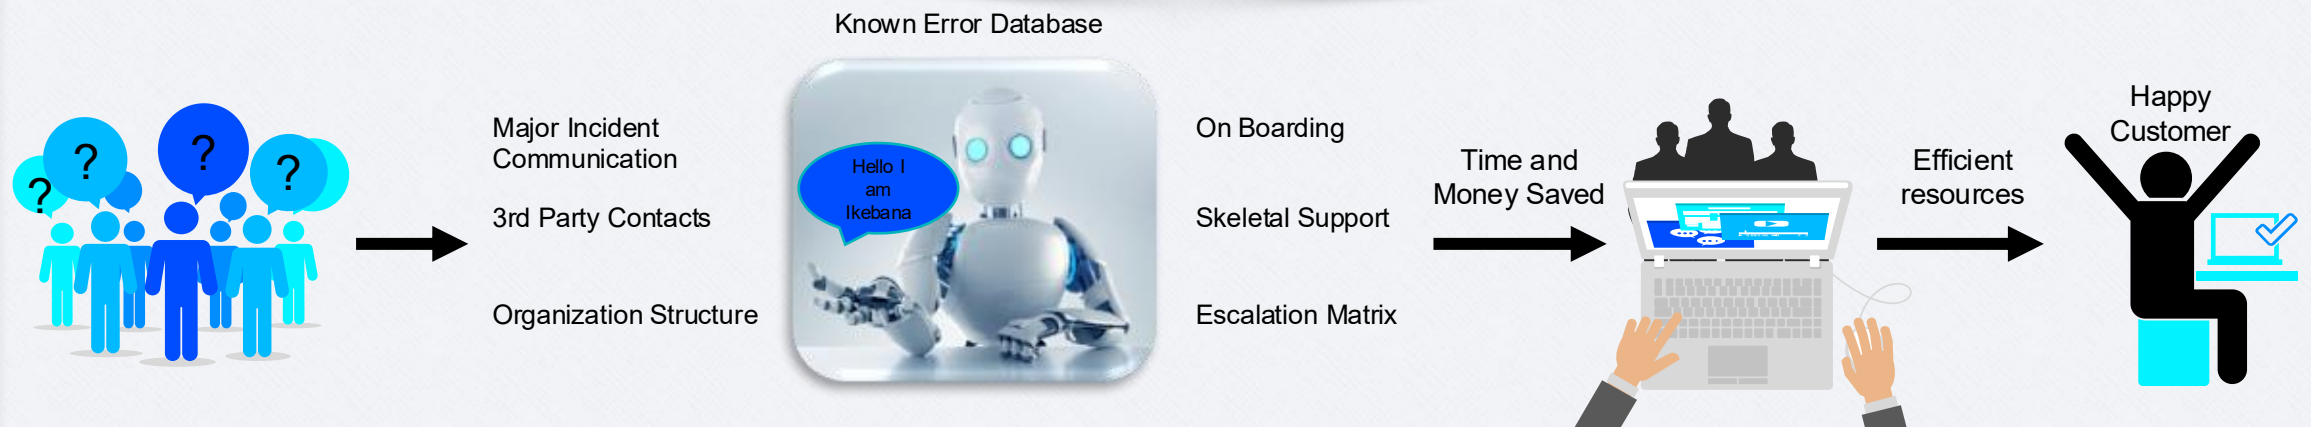

VIRTUAL ASSISTANT

Before

After

TICKET TOOL MONITORING

Hundreds of tickets flow from business towards our support team (Service Now). To provide timely solution and customer satisfaction team need to manually monitor tickets for their aging, third party coordination, un-assigned tickets etc. One of the critical and time consuming task is to go thru the ticket description and alert team if some critical words like PEC, Finance, SSO, VIM, Payroll, CDPPT etc. are found in ticket description and inform leads irrespective of ticket priority.

ROBOTICS SOLUTION

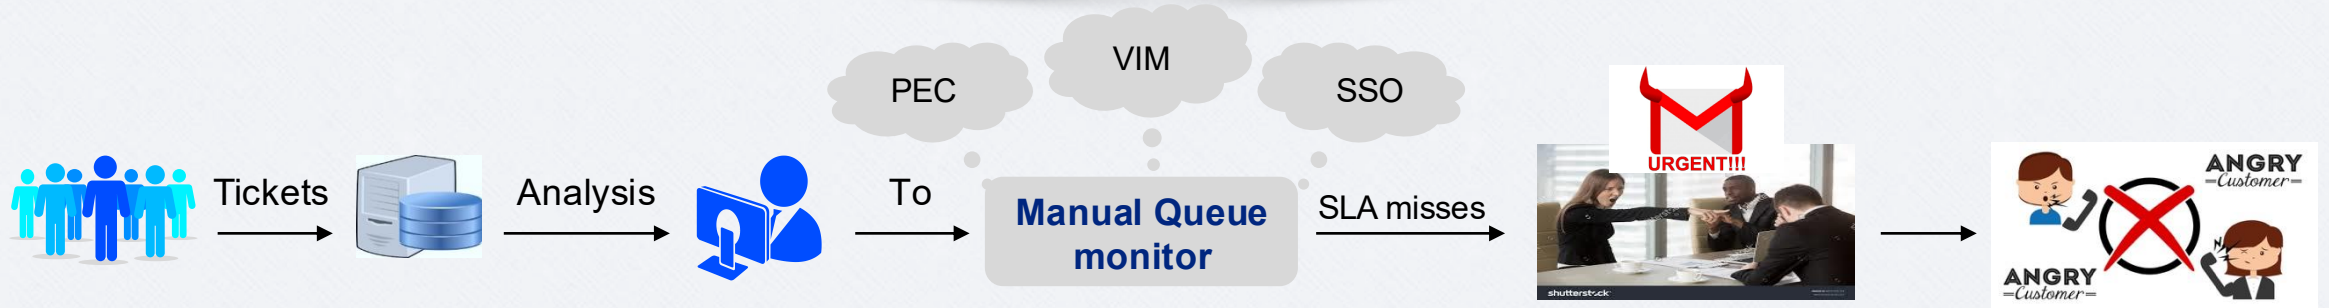

We developed a RPA based solution which automatically log into ServiceNow, Scan thru the ticket description, search for the particular KEY CRITICAL WORDS and sends report the leads.

This ensures that we are looking beyond key IT SLAs and able to provide more business value and satisfaction and critical business are running seamlessly.

MASS PO CREATION

Time is precious and especially when it comes to client and business, it matters a lot. Every year 40000 + PO's are created in SAP system. Currently, PO creator, creating PO in SAP system and enters each field by field from excel sheet for each line item. This repetitive manual activity leads to manual errors and is time consuming activity.

ROBOTICS SOLUTION

We have adopted RPA tool to automate the PO creation. Each click which was done manually is now recorded using RPA. Robot takes the input from an excel sheet, enters the information in SAP system and then saves the output (Purchase order no) back to the same excel sheet in a new column.

This proposed Robot avoids human errors, saves lot of time, excel sheet can be referred for PO no for offline reference, 24*7 availability and ensures all client compliances. This results in faster turn around time

The screenshot shows the SAP PO creation interface. At the top, there are tabs for 'Options' and 'Help'. Below them is an 'Actions' dropdown menu. The main form contains several fields: 'Standard' (set to 'PO2076'), 'Hold' (checkbox), 'Creditor ID' (set to 'ADVANCED0001'), 'Name' (set to 'Advanced Office Systems'), 'Currency ID' (set to 'Z-US\$'), and 'Date' (set to '12/04/2017'). Below these fields is a 'Documents Commitments' section. This section contains a table with columns: 'U of M', 'Quantity Ordered', 'Unit Cost', 'Quantity Canceled', and 'Extended Cost'. The table has five rows of data. At the bottom right, there is a 'Subtotal' section with fields for 'Subtotal', 'Trade Discount', 'Freight', 'Miscellaneous', 'Tax', and 'Total'. The 'Total' field shows a value of '\$600.00'. At the bottom left, there are fields for 'COMPANYPUR' and 'SUP1'. At the bottom right, there is a 'PO Status' field and a 'Change Data' button.

U of M	Quantity Ordered	Unit Cost	Quantity Canceled	Extended Cost
each				3
NORTH				0
Each				4
NORTH				0
Each				1
NORTH				0

Subtotal	Trade Discount	Freight	Miscellaneous	Tax	Total
\$600.00

DEVOPS

DEVOPS – CI & CD

An average of 36 thousand hours of minor development and projects are delivered to the production environment each year. Tools like JIRA, Solution Manager, HP-QC are used in siloes to support the development process.

For eg: Requirements are captured in JIRA, developer writes the code in SAP, manual code review is carried out with ACRT tool, testers manually test the code and track the corrective action in HP-QC, and then the code is deployed to production via ChaRM. This leads to a manual errors and considerable time is lost impacting timely decision making.

DevOps in Telia Engagement:

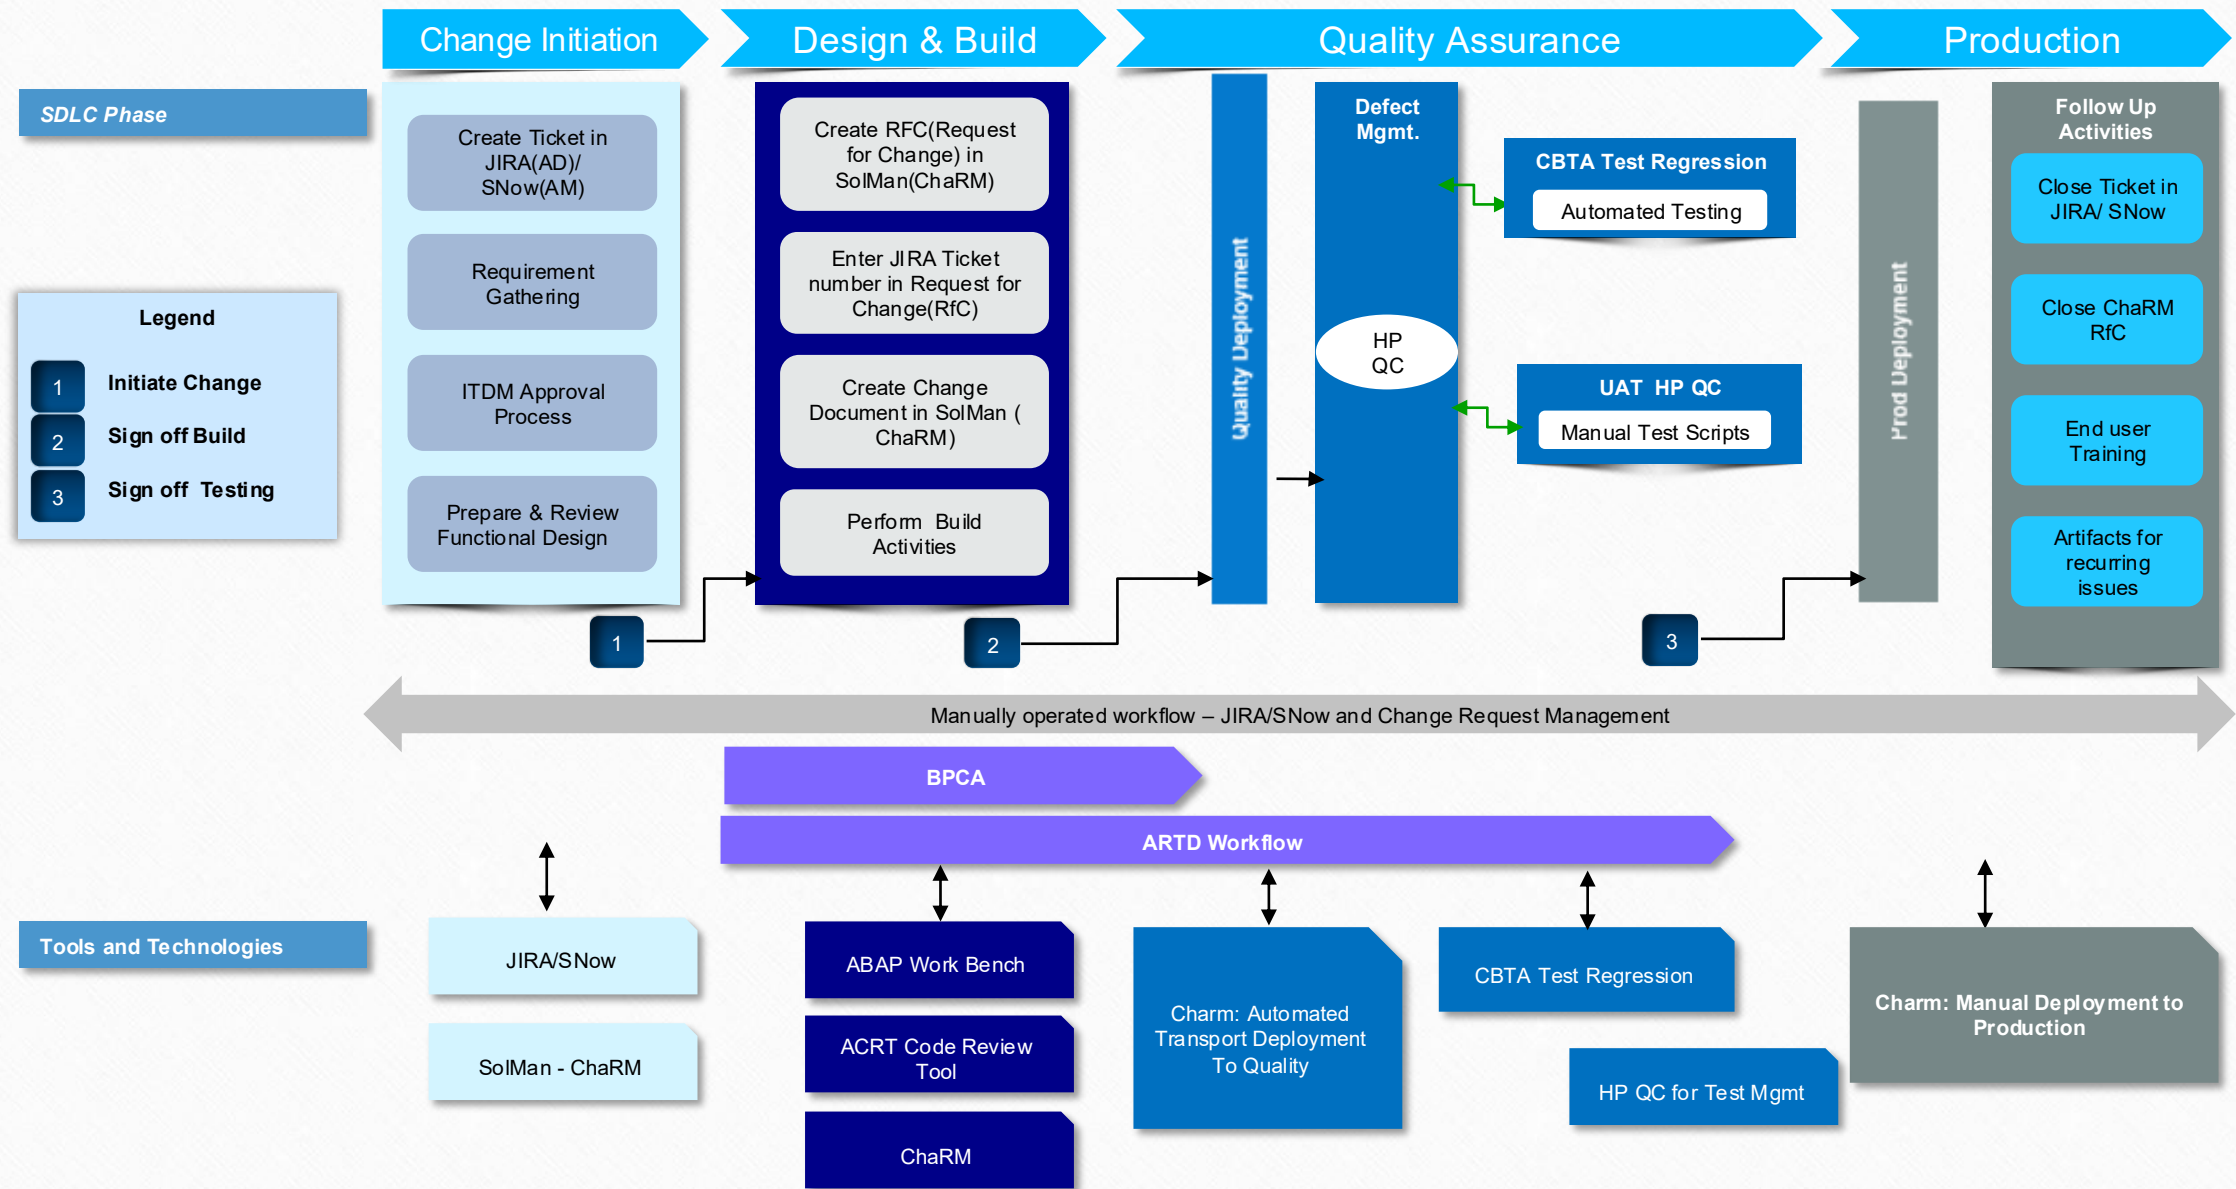

Change initiation and requirements: JIRA and SNOW to capture all the requirements for change.

Design and Build: SolMan's ChaRM is used to capture the development, SolMan and Accenture Code Review Tool (ACRT) triggered by ARTD workflow is used to maintain quality of the development.

Quality Assurance: ARTD also triggers an automated deployment of transport requests to Quality environment via SolMan. Automated regression testing using Component Based Test Automation (CBTA) tool is then carried out with a clear visibility on the defect and test status via user-friendly dashboards. Business Process Change Analyser (BPCA) is used to find out the list of all impacted business processes or scenarios.

Production Deployment: User acceptance and production deployment will continue to be a manual process based on agreement on the Telia process

ARFT ACHIEVEMENTS

BENEFIT - ONE AR SOLUTION SWEDEN

Project will aim to replace RESK-BIRKA and other small AR solution with RMCA solution

Sr.No.	Benefit Details	Quantitative/ Qualitative	Benefit Type	Amount (SEK)/Annum
1	Maintenance cost saving for RESK	Quantitative	System Maintenance	3,000,000
2	Maintenance cost saving for BIRKA	Quantitative	System Maintenance	3,000,000
3	Maintenance cost saving for ROBIN	Quantitative	System Maintenance	2,500,000
4	Maintenance cost saving for RR2R	Quantitative	System Maintenance	1,500,000
5	Maintenance cost saving for SAP AR	Quantitative	System Maintenance	1,400,000
6	Automatic overpayment solution to save cost of overpayment slip correspondence towards customer – 40K Correspondence/Month	Quantitative	Saving with Atomization	9,600,000
7	Advance payment matching rule of RMCA to save cost of manual work – 25K transaction/Month (12.5 FTE)	Quantitative	Saving with Atomization	6,000,000
8	Automatic solution of closing/reopening of lines saves cost of manual work – 10K cases/Month (5 FTE)	Quantitative	Saving with Atomization	2,400,000
9	One AR system simplifies user interaction and reporting for business	Qualitative	Saving with Atomization	☺ Happy Client
			Total	29.4 M SEK/Annum

A photograph of a desk setup. In the center, a corkboard with a wooden frame is mounted on a light-colored wall. A white rectangular card is pinned to the corkboard with four red pushpins, displaying the text "Thank you" in a bold, dark blue font. To the left of the corkboard, a bright red ceramic mug sits on the desk. To the right, a white cylindrical pen holder is filled with various colorful pens and pencils. In the bottom right corner, a stack of colorful sticky notes is visible. A desk lamp is partially visible in the top right corner, casting a soft light on the scene.

Thank you
