Virtual Experience – a User First Offering

November 2016

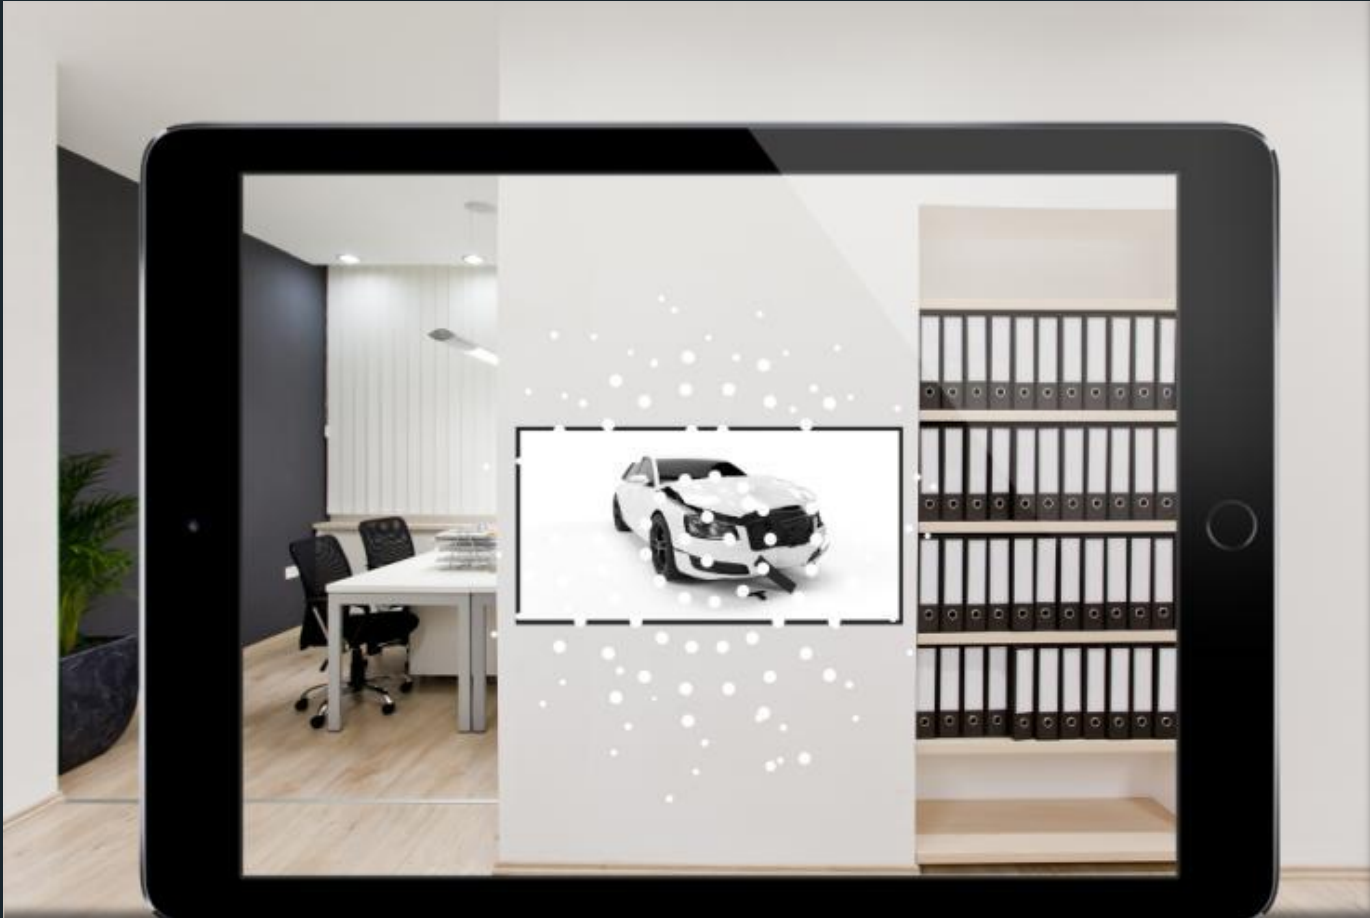

Strategy | Consulting | Digital | Technology | Operations

Insurance industry use cases

VR- AR based Auto insurance

Insurance

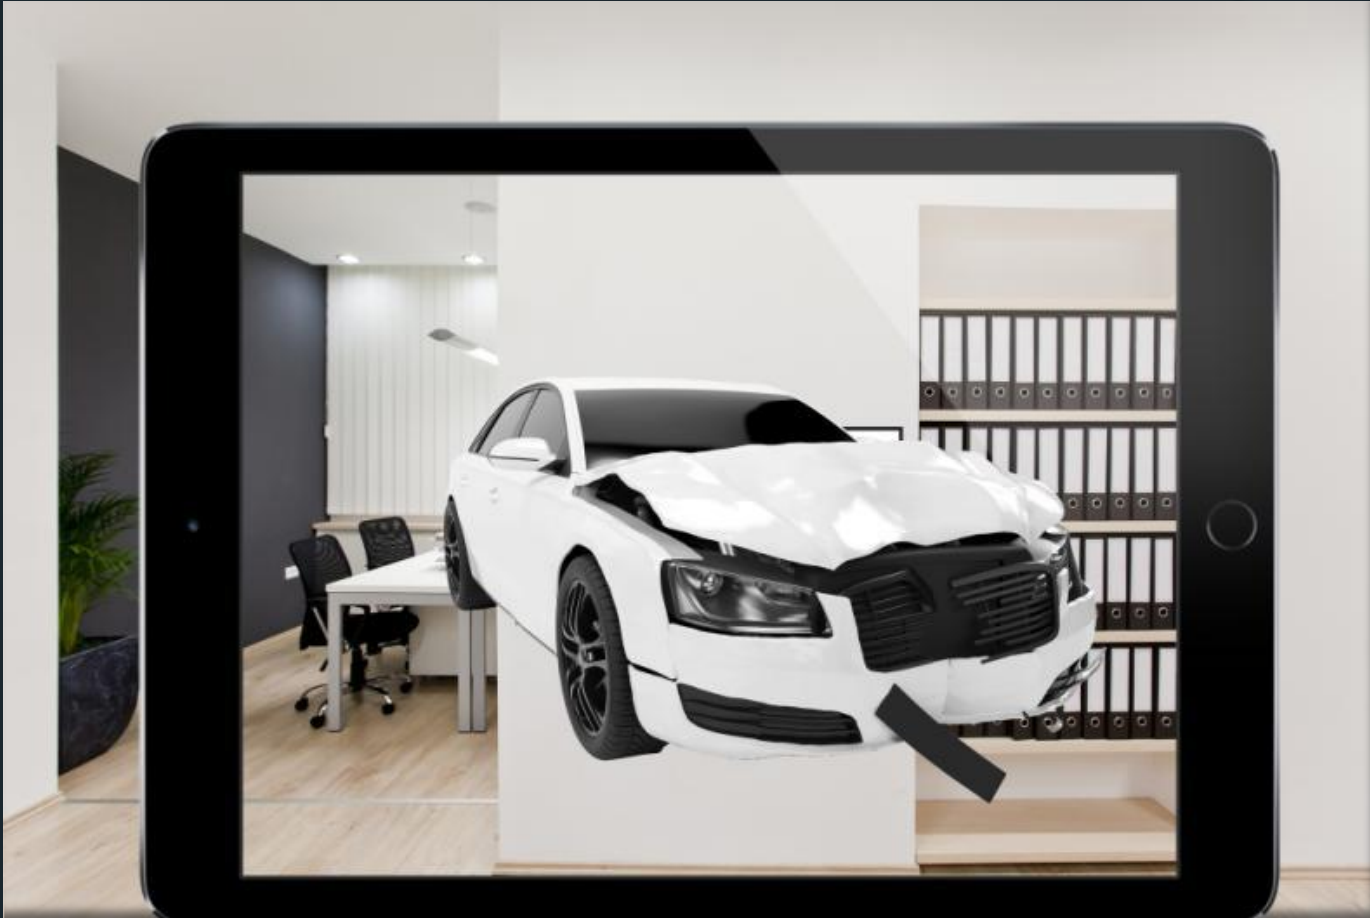

- Human evaluator is past - Virtual evaluator is the future
- Scan the damaged car image

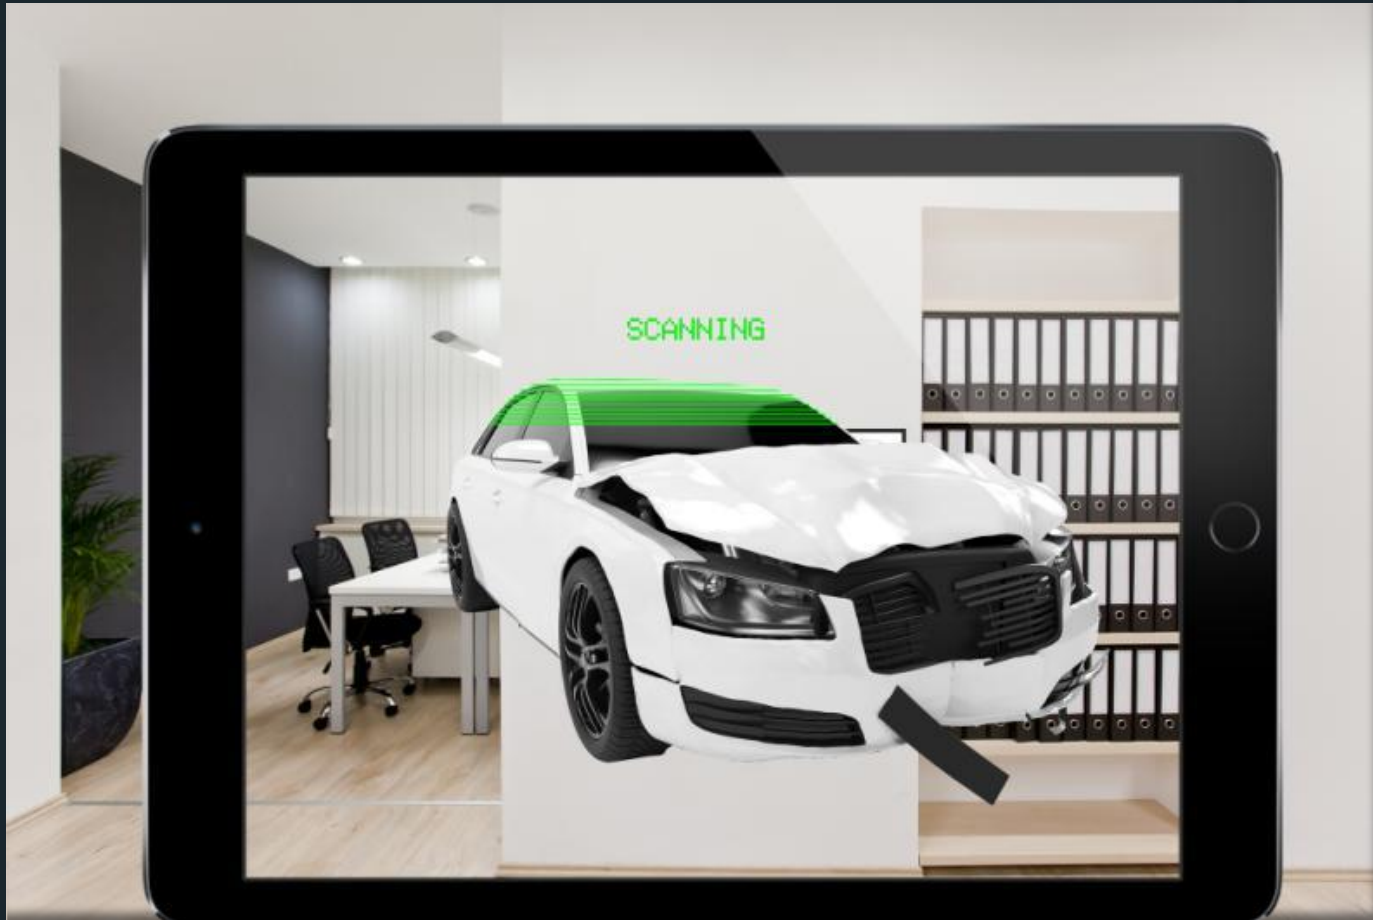

Insurance

Human evaluator is passé - Virtual evaluator is the future

- The app recognizes the car model and renders it in 3D.
- Evaluator can see the car in 3D in 360

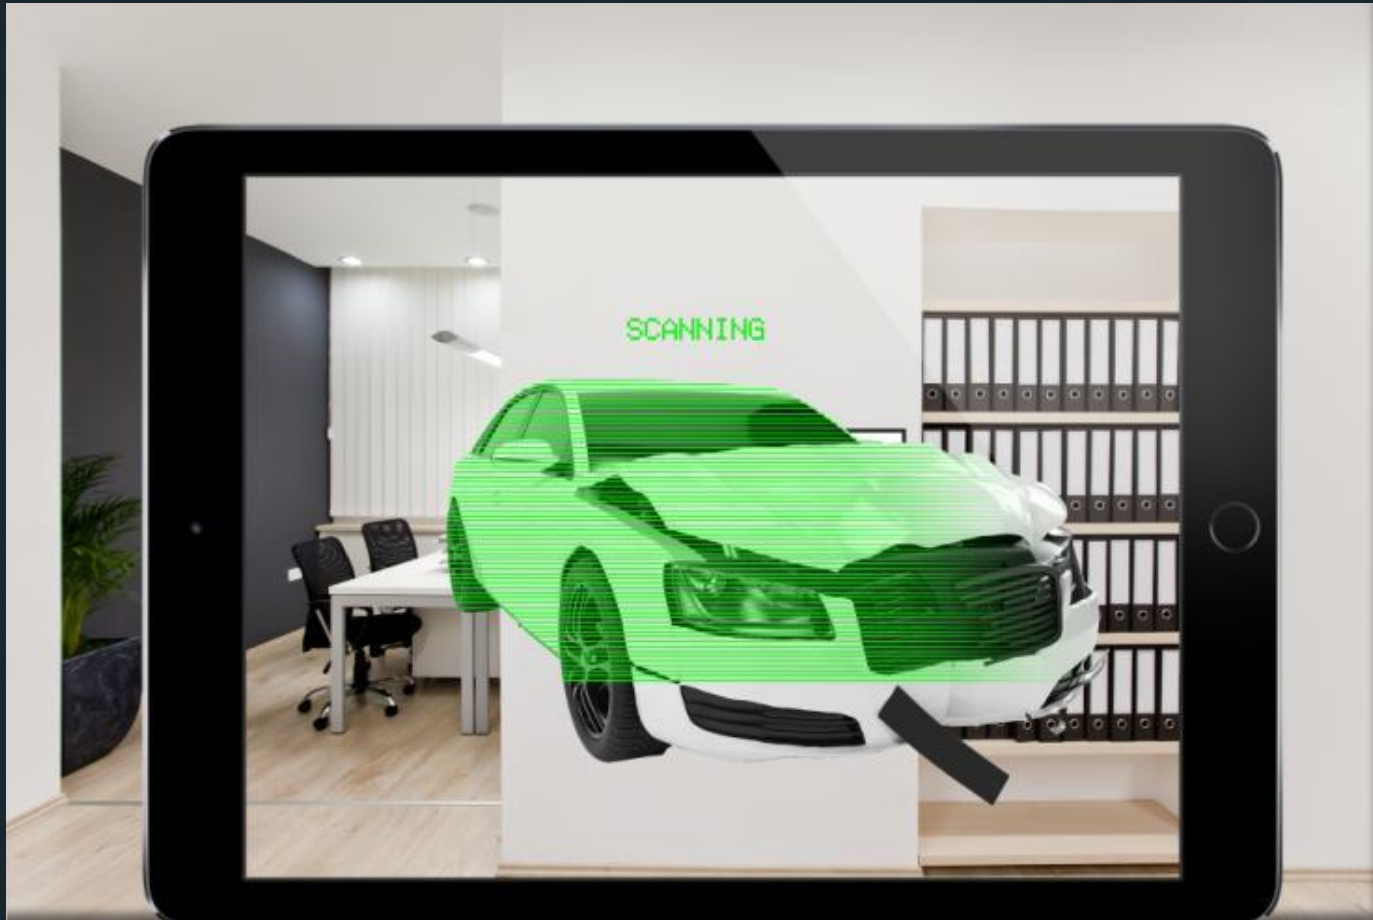

Insurance

- The engine scans the entire car to indentify the possible damages.

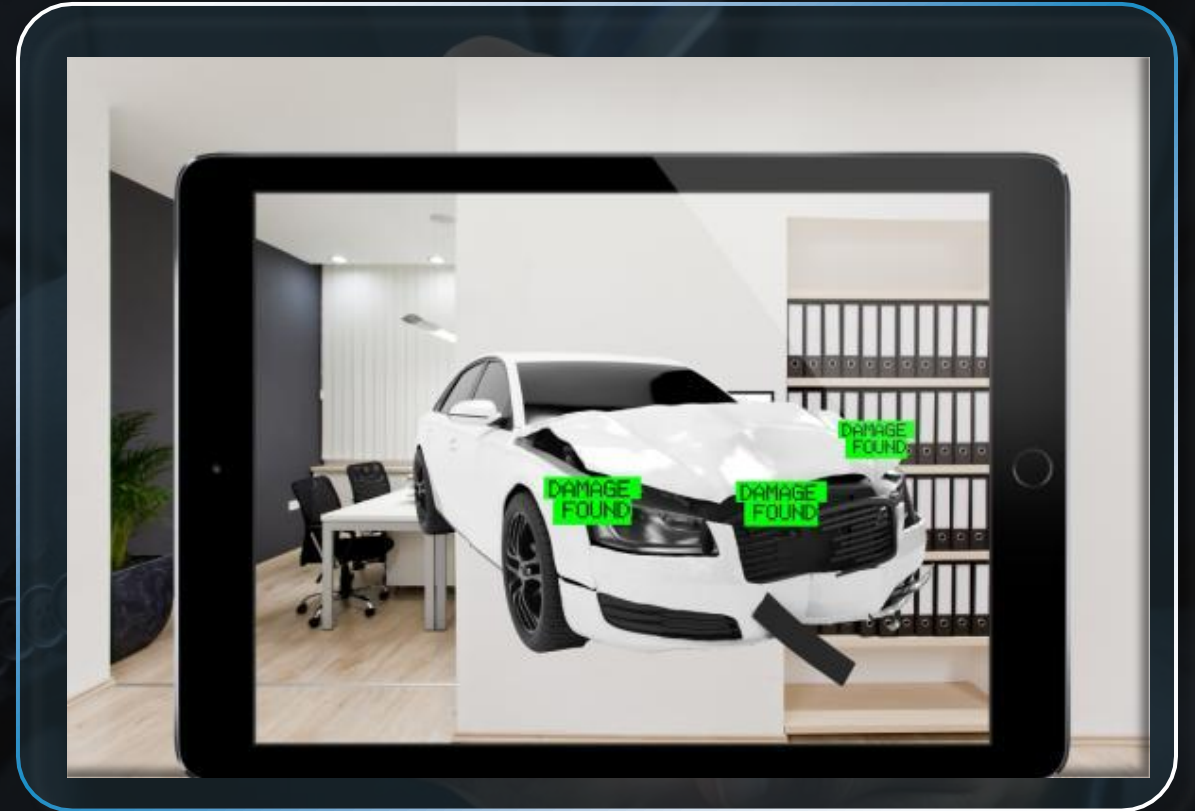

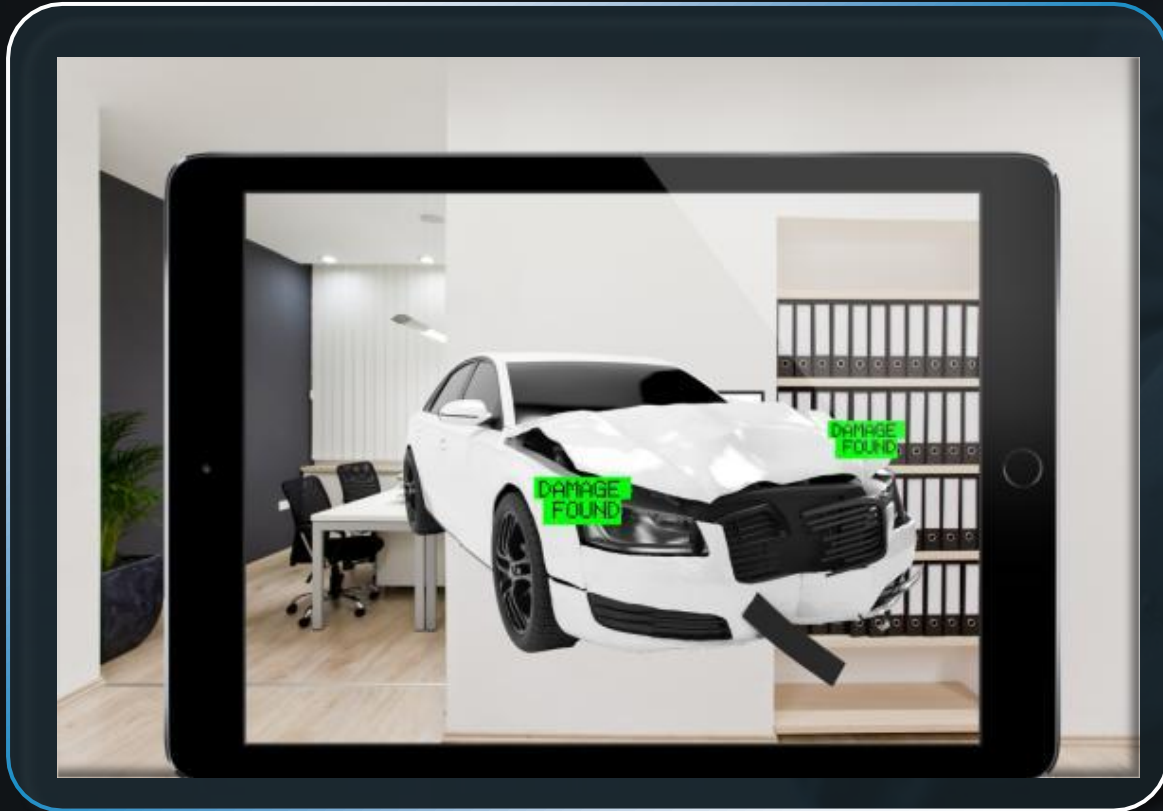

Insurance

- The engine scans the entire car to identify the possible damages.

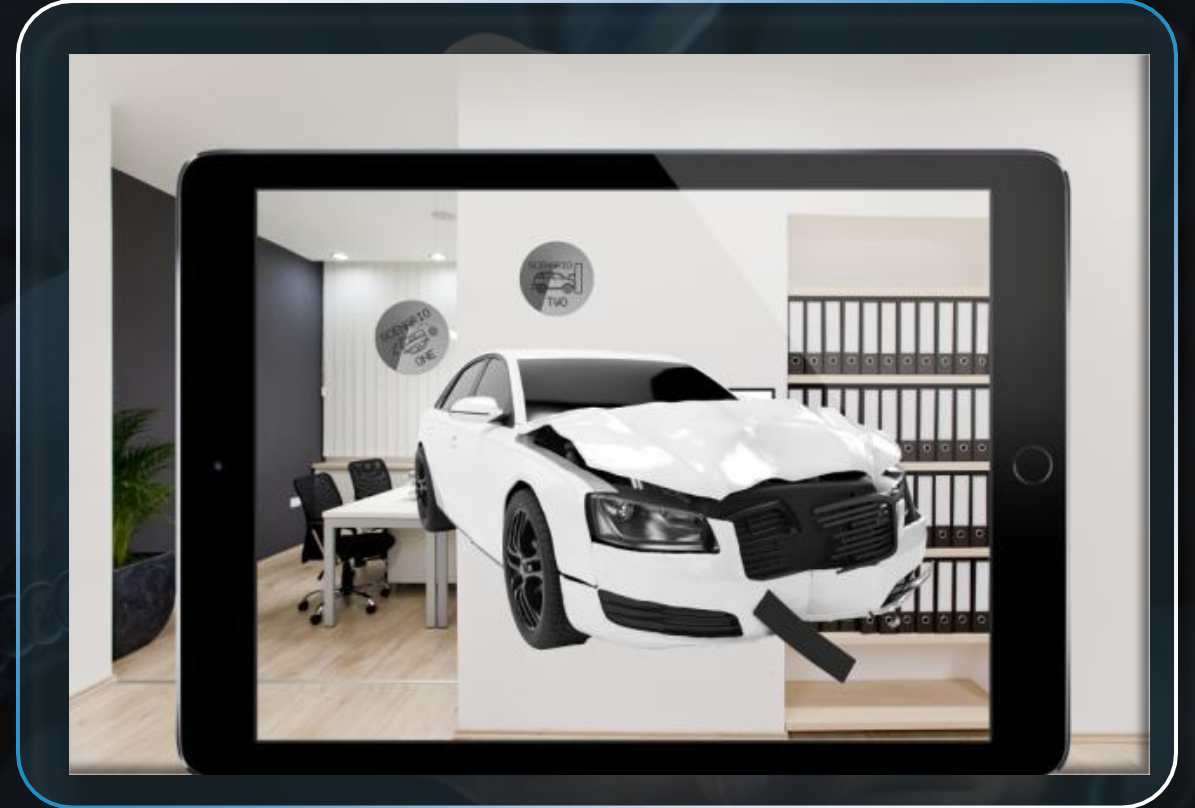

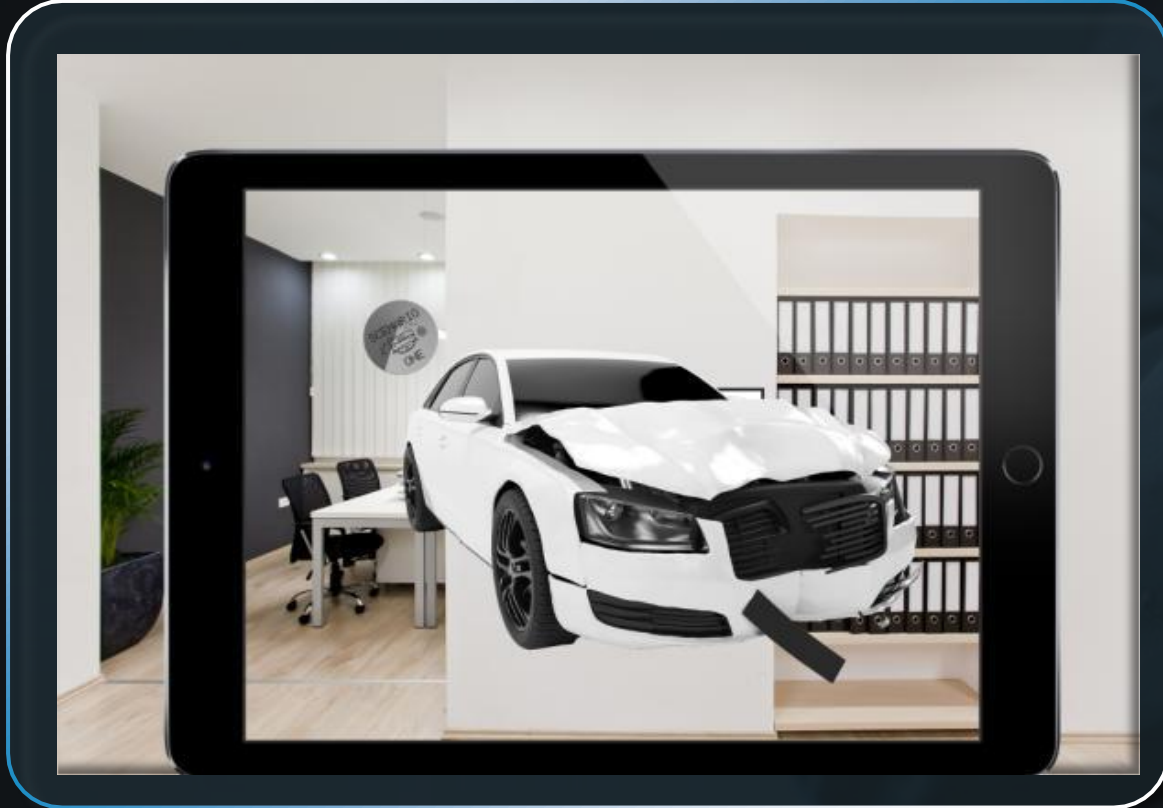

Insurance

- Identifies the damaged areas and pops up a notification

Insurance

Insurance

- Once it identifies the damaged area and understands the damage.
- The engine virtually creates multiple scenarios of what and how the damaged could have occurred.
- An animation scenario will be simulated basis the damage , which helps the evaluator to give quick analysis about the accident and potential damage.

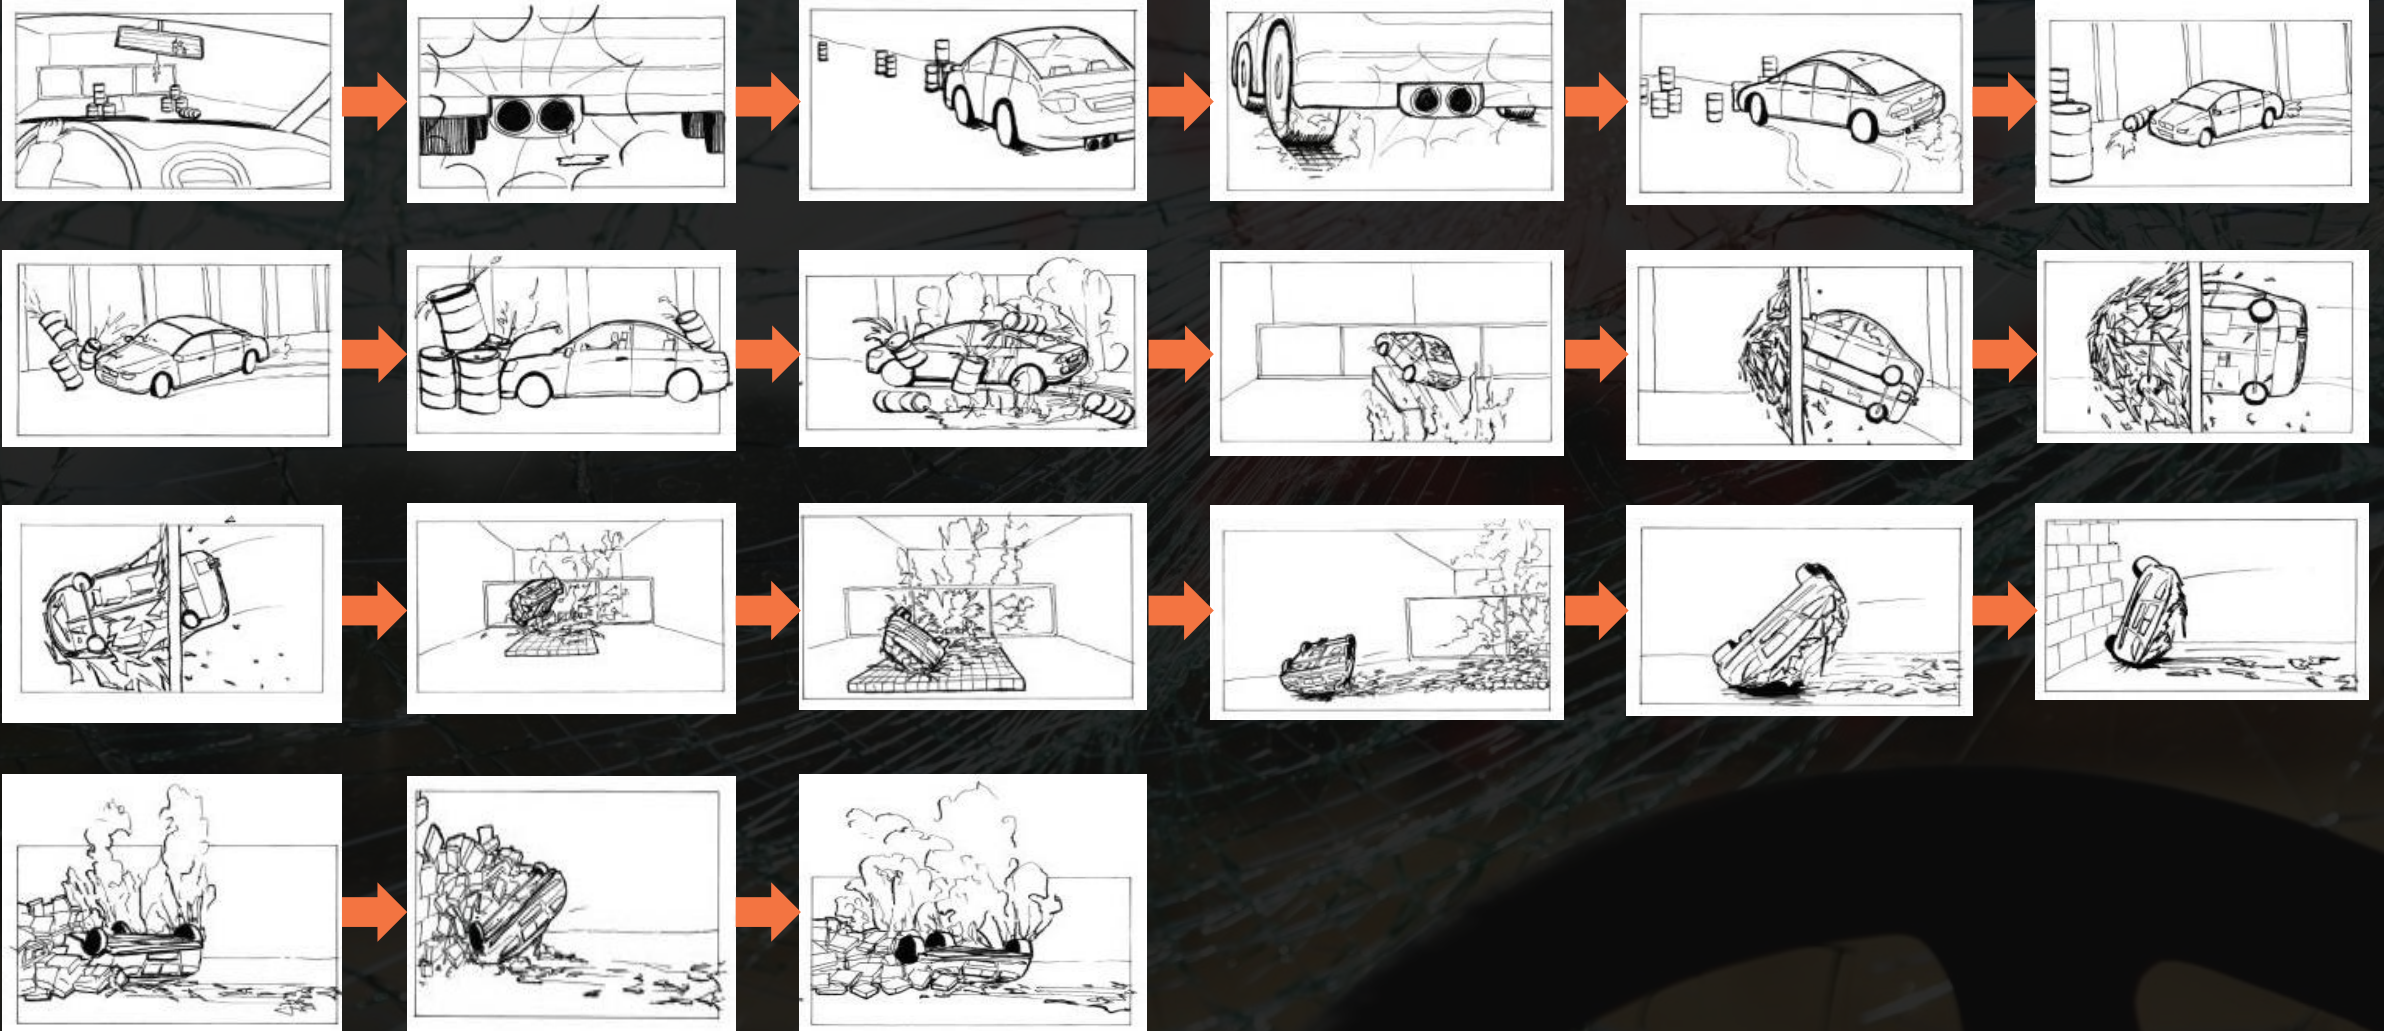

Insurance

- The system can also give the potential damage of the engine and other parts in %'s

Insurance

Virtual simulations (Animations) on How the damage would have occurred.
