PERVASIVE NETWORK TRANSFORMATION ACROSS 4 DIMENSIONS

WISE PIVOT

DYNAMIC NETWORK SERVICES

Rapid launch of software driven services to keep pace with client desires and expectations

B2C

- Connected Home
- Consumer IoT

B2B

- SD-WAN/vCPE
- Cloud Services
- Enterprise Mobility & Security
- Intelligent Enterprise

5G (B2C & B2B)

- Industry verticals
- Network Slicing
- Industry X.0

Improve Customer Experience

GROW + TRANSFORM THE CORE

INTELLIGENT NETWORK OPERATIONS

Transform the operating model towards customer-centricity and agility while leveraging automation (RPA, AI) into the core culture

- AI-Driven Assurance
- Multispeed Technologies and Operations
- NOC to SOC
- Virtual Service Ops
- Workforce Transformation*

Increase Revenue (outside in)

OUTSIDE IN

DYNAMIC NETWORK SERVICES

INTELLIGENT NETWORK OPERATIONS

THE PERVASIVE NETWORK

MIGRATIONS/ DEPLOYMENT

NETWORK PROGRAMMABLE PLATFORMS

INSIDE OUT

Decrease Cost (inside out)

GROW + TRANSFORM THE CORE

MIGRATIONS/DEPLOYMENT

Ultra lean management of legacy network, in parallel to accelerated migration towards new stack and deep densification of Fibre&5G. Needs a two speed approach to migrate and sustain while building the new

- E2E program orchestration and scaling
- Network Service Factory
- Product and Service migration and decommissioning
- Deployment and Migration advisory
- Network Cost Reduction

SCALE THE NEW

NETWORK PROGRAMMABLE PLATFORMS

Transform the cost base and the customer experience by creating software defined, programmable and reusable solutions driven by end to end orchestration

- Telco Cloud (SDN / NFV)
- Automation, Orchestration and abstraction
- RT-OSS
- Analytics / Deployment

PROGRAMMABLE NETWORK PLATFORMS – THE CATALOGUE

DYNAMIC NETWORK SERVICES

accenture consulting accenture strategy

B2B

Create a launch pad for digital services for B2B (SD-WAN/vCPE, Cloud Services, Enterprise Mobility, & Security, Intelligent Enterprise)

B2C

Enhance B2C product portfolio around connected home and consumer IoT

5G

Support 5G pervasive network design and rollout supporting Industry verticals, Network Slicing, Industry X.0

INTELLIGENT NETWORK OPERATIONS

accenture consulting accenture operations

INTELLIGENT OPERATION ADVISORY

Shape sustainable transformation journey

AI-DRIVEN OPERATIONS

Accelerate the adoption of network analytics, AI, RPA to enhance customer experience and operation effectiveness

MULTISPEED TECHNOLOGIES AND OPERATIONS

Optimize "order to activate" and "ticket to repair" process while evolve to lean digital operation

NOC TO SOC TO VOC

Enable the NOC evolution to SCC and VOC, leveraging analytics capabilities

CONNECTED DIGITAL WORKER

One-shop solution for Digital Field Workforce for design automation, real time collaboration and enhanced reality access to digitize the network lifecycle

PROGRAMMABLE NETWORK PLATFORMS

accenture consulting accenture technology

TELCO CLOUD (NFV/SDN)

Transform from a siloed vertically integrated Network to a "Network as a Service model" with a elastic and highly automated resources

AUTOMATION, ORCHESTRATION AND ABSTRACTION

Inject Pervasive Automation across Digital Network fulfillment and assurance processes for real-time service lifecycle management

RT-OSS

Provides with ready-to-use tools and accelerators covering the functional domains of Multispeed Service Orchestrator and Real time Service Management

NETWORK / PRODUCT ANALYTICS

Comprehensive digital platforms covering the network deployment, analytics, and predictive assurance

MIGRATION / DEPLOYMENT

accenture consulting accenture digital

END-TO-END PROGRAM OFFICE & SCALING

Accelerate, scale and de-risk the execution of Large Network programs

NETWORK SERVICE FACTORY

Centralize, industrialize and continuously improve/automate repetitive and high volume processes

PRODUCT/SERVICE MIGRATION & DECOMMISSIONING

Maximize the benefits of migration to the 'New' whilst protecting Customer Experience

DEPLOYMENT & MIGRATION ADVISORY

Setup and optimize Network Deployment and Migration Programs for success

NETWORK COST REDUCTION

Optimize the Network Costs

PROGRAMMABLE NETWORK PLATFORMS - TRENDS

NEW OPERATING MODEL & INTELLIGENT OPERATION

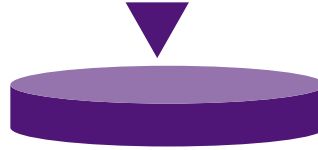

Telco operating model requires Operational Cost reduction and Automation increase with an **overall Customer Experience improvement**.

AUTOMATION

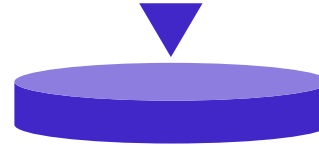

Telcos need velocity and agility (in one word 'automation') to **deploy/upgrade/change the distributed cloud** base network infrastructure and the cloud based network functions

5G & MEC

Network Virtualization, **5G and MEC** enabling CSP exploit new revenue stream and business opportunities

DATA DRIVEN TELCO CLOUD

Digitalization and **real time analytics** are the key to **enable Telcos to create new experience**, benefits and value for end customers, optimize investment in the Cloud Based Network (Real Time Capacity Planning) and improve customer experience

NEW B2B SERVICES & DIGITAL ECOSYSTEM

Enable New B2B Digital Services and manage new Digital Ecosystem leveraging **OTT and Industry X.0 Partner & Competitors**

ANALYTICS/
DEPLOYMENT

Inside Out Transformation from a siloed vertically integrated Network to Network as a Service model on shared infrastructure, while enabling new revenue streams for growth leveraging transformation program design from business to technology & operating model, supported by business case measuring financial outcomes

THE CHALLENGE

- Network “softwarization” (based on SDN/NFV, DevOps) impacts complete ecosystem of technology, processes, and workforce of the Telcos.
- Technical complexity increases with SDN/NFV if not properly addressed by a profound change of how technology is managed and evolved
- Pressure to reduce internal costs in the whole lifecycle management of Infrastructures and services is high

OUTCOMES

- Steer transformation project plan and areas of focus based on value delivered
- Leverage automation into service delivery achieving..
 - increased velocity of up to 70% in Infrastructure & Service delivery
 - Increase quality of up to 70% of delivered Telco Cloud Component services
 - Increase operational efficiency of up to 80%

VALUE PROPOSITION

Define and implementing a value driven roadmap to move from legacy to Digital and Programmable Platforms...

- converting a technology transformation also to a business transformation
- enabling the “Digital & Programmable Services Portfolio”
- automating the Lifecycle Management (Testing included) of Infrastructures and Virtual Network Functions, to cope with the complexity of the target solutions

RT OSS

ANALYTICS/
DEPLOYMENT

WE PRESENT YOU TELECOM ITALIA..

- **(R)evolutioning to become digital with the “DigiTIM” program**
- Focus on
 - best in class customer engagement through digital and agile customer journey redesign
 - Efficiency on TCO
- Quantifiable targets:
 - “Smarter” Service Creation Process with automation
 - TCO saving >30%
 - -80% Lead time for new offer creation
 - ~ -70% Developments vs. configuration

..THAT ASKED OUR SUPPORT ..

- For a **Prime System Integrator** to realize its Programmable Network Platform, through:
 - **Technology Transformation**
 - NFV Infrastructure Rollout
 - VNF Onboarding Factory
 - Network Automation
 - **Operating Model Transformation**
 - DevOps Enablement Journey
 - Automated Process re-engineering
 - Network Academy for Workforce re/up skill
 - **Efficiency**
 - Business Case definition
 - Tech & Business KPI monitoring

..AND TOGETHER WE OVERCAME CHALLENGES..

- **Resistance to change:** Organization, role and responsibility
- **Budget reallocation** guidelines and execution
- **Technology Maturity** throughout the stack
- **Cloud Nativeness** lacks for VNF ecosystem
- **Communication**, broadcasting value and knowhow

..TO DRIVE BUSINESS RESULTS

- **Velocity**
 - -70% elapsed for new NFV site creation
 - -60% elapsed for VNF Onboarding
- **Efficiency**
 - Saving Measured 20% TCO Savings
 - Target 30-35% to achieve at steady state on Capex/Opex ...improving as per plan in the next years.

NOW REFLECT ON WHAT YOU JUST LEARNED ABOUT NETWORK PROGRAMMABLE PLATFORMS....

ANALYTICS/
DEPLOYMENT

Pervasive Automation across the Digital Network fulfillment and assurance processes based on service abstraction, dynamic orchestration and analytics-driven real-time intelligent operations

THE CHALLENGE

- Slow time to market for features and new product offerings
- Lack of scalable development for supporting new products
- Reactive operations lead to poor customer satisfaction
- Operate within legacy telco environment and systems
- Highly reliable and scalable platforms and solutions

OUTCOMES

- Reduce OPEX by leveraging the promised efficiencies of virtualized operations, abstraction to ease multi-vendor integration and applying Advanced Network Analytics across the Service Lifecycle for intelligent operations
- Improve Scalability and Availability by leveraging cloud-based operations
- Improve customer satisfaction by proactive and predictive network management
- Fast time to market by rapid delivery of new product features and roadmap

VALUE PROPOSITION

Pervasive Operation Automation achieved leveraging:

- Real Time Operations Blueprint establishes the Strategy and Roadmap for the tools, processes, operating model, and KPI's
- A multi-speed architecture and operations leveraging real time & legacy data sources for end-to-end Service Fulfilment & Management
- Future Operating Model with cross-functional, agile and Devops teams and models

CREDENTIALS/ASSETS

Tier 1 SP Wi-Fi Dynamic Service Solution

- Turnkey cloud-based scalable multi-vendor solution

SD-WAN Dynamic Service Solution

- Turnkey solution to boost B2B service from minimum viable product to full portfolio

IP Network Programmability Solution

- Automation and simplification of network service provisioning and configuration

TIER 1 SP JOURNEY IN NETWORK AGILITY AND EFFICIENCY

WE PRESENT YOU TIER 1 SP WIFI

Experiencing challenges post the acquisition of a large managed Wi-Fi services provider

- Was not seeing the expected ROI
- Expanding customer base
- Large product feature list and evolving product roadmap
- Challenged to respond to market in an agile fashion

..THAT ASKED OUR SUPPORT ..

For a Prime System Integrator to realize its Programmable Wi-Fi Platform, through:

- **Technology Transformation**
- Transform IT team and static legacy enterprise architecture
- **Operational Transformation**
- Agile, predictable and reliable product delivery

..AND TOGETHER WE OVERCAME CHALLENGES..

- **Technology Transformation**
 - Cloud based architecture for scalability
 - Integration to legacy systems for non-differentiated capabilities
 - Multi-vendor modular integration
- **Operational Transformation**
 - Scaled Agile Framework
 - Devops & Automation
 - Cultural Right-Mindedness
 - Cross-functional blended teams
- **Agility and Efficiency**
 - On-demand Monthly and weekly releases

..TO DRIVE BUSINESS RESULTS

- Customer focused features
- Faster time to market for new features and product offerings
- Reduced development cost and Infra spend
- Higher reliability and quality

NOW REFLECT ON WHAT YOU JUST LEARNED ABOUT NETWORK PROGRAMMABLE PLATFORMS....

WHERE ARE WE NOW?

ANALYTICS**

REAL TIME OSS AS BACKBONE OF THE NEXT GENERATION TELCO TO ADDRESS NEW BUSINESS PRIORITIES

TELCO CLOUD (SDN / NFV)

AUTOMATION,
ORCHESTRATION &
ABSTRACTION

RT OSS

ANALYTICS/
DEPLOYMENT

Real Time OSS is the enabler for the connected business where the ecosystem partners can thrive and the pervasive network can be used as the key differentiating asset.

DIFFERENTIATE THROUGH PERVASIVE NETWORK

Network and Infrastructure abstraction through APIs to ecosystem partners and adoption of new technologies (e.g. 5G, MEC) enabling distinctive asset monetization

EMBRACE SPEED & AGILITY

Full decoupling between Connectivity Services and lean Digital Communication Services enabling the speed and agility needed for digital product development, fulfillment and assurance. Allow Self-Service & real time service lifecycle management and a customer centric assurance improving customer experience

ENABLE PARTNER ECOSYSTEM

Allow Hyper-connected extended Telco to enable digital platform-based business models and exploit new business opportunities in a complex value fabric (**ecosystem partner services co-creation, extended B2B2x value chain**, etc)

ACCENTURE HAS DEVELOPED AN **E2E OFFERING** TO ENABLE MULTISPEED FROM CHANNELS TO NETWORK AND BOOST KEY LEGACY OSS FUNCTIONS.

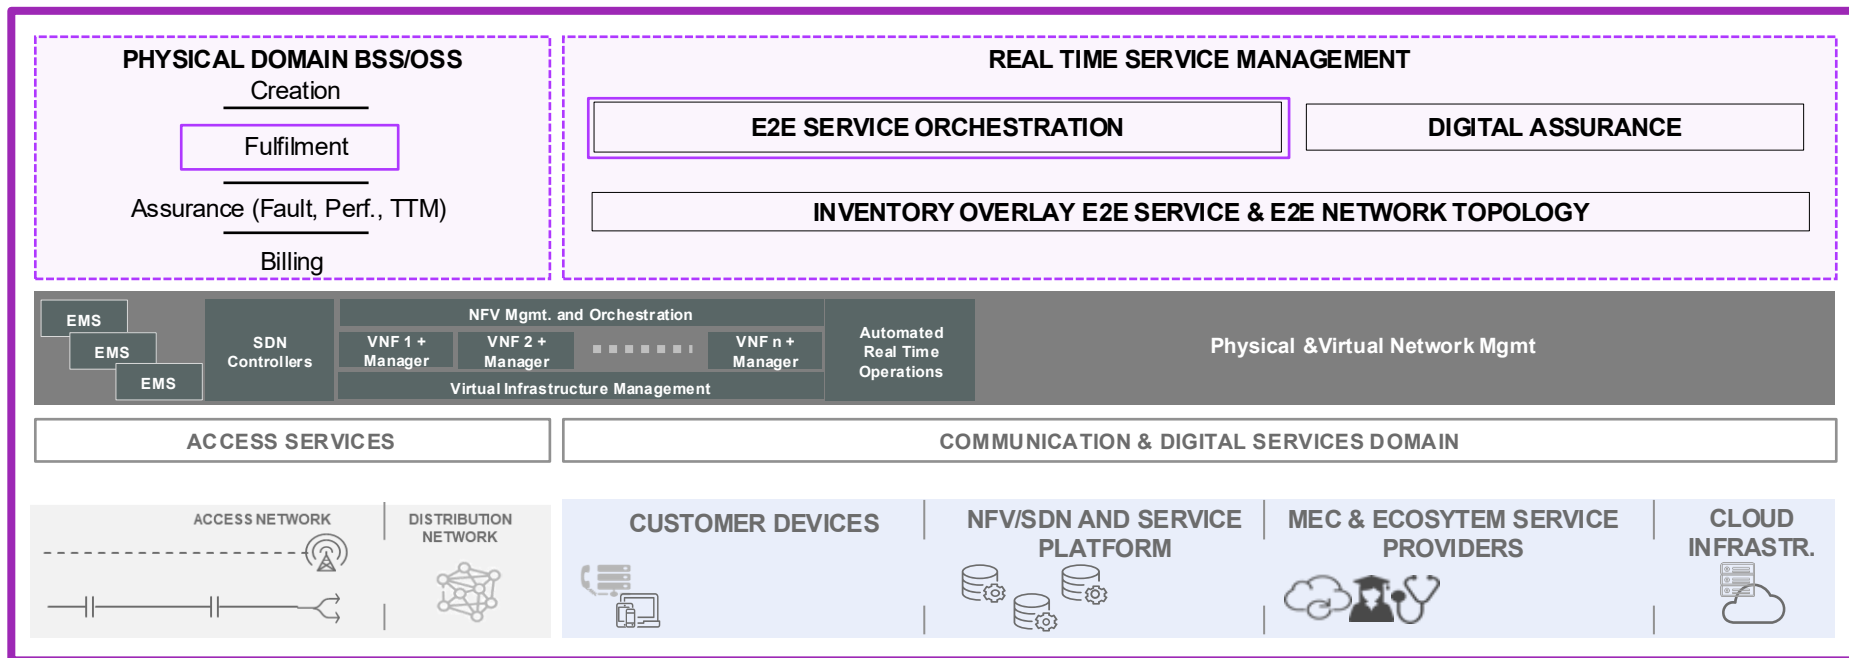

TELCO CLOUD (SDN / NFV)

AUTOMATION,
ORCHESTRATION &

RT OSS

ANALYTICS/
DEPLOYMENT

SDS E2E ORCHESTRATOR is a key part of Accenture strategic investment plan and is our reference solution – born from 15+ years on-field experiences – for orchestration, provisioning and activation to address the challenges of order-to-activation process of access services. And it can be deployed also as real-time orchestration of digital services. SDS is a flexible and highly configurable catalogue driven orchestrator built according to bottom-up design, DevOps ready, with powerful tracking and monitoring capabilities

SDS RT-OSS E2E ORCHESTRATOR

KEY FEATURES AND CREDENTIALS

TELCO CLOUD (SDN / NFV)

AUTOMATION,
ORCHESTRATION &
ABSTRACTION

RT OSS

ANALYTICS/
DEPLOYMENT

TECHNICAL CATALOGUE

The component where order decomposition rules are configured along with the decomposition rules that allow the definition of services and related resources

DYNAMIC ORCHESTRATION ENGINE (DOE)

The engine that dynamically orchestrates the elementary building blocks allowing time-to-market and reusability

ORDER MANAGER

The core of the asset with its tracking, integration, fallout management and SLA control capabilities

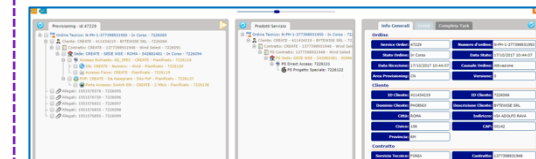

LEAN ACTIVATION

The decoupling module, with command orchestration intelligence, between a technology agnostic resource manager and the network – virtual or not - element manager

SERVICE INVENTORY

Service Inventory module where the technical configuration assigned to the customer is stored and used in the design & assign step

SERVICE DESIGN AND LAUNCH WITH OTT APPROACH

WE PRESENT YOU TIM BRAZIL...

- TIM Brazil is one of the largest Fixed and Mobile network operators in South America. It was experimenting an high level of capex for introducing the new services and high level of OPEX for the licensed fulfillment stack
- TIM was aiming to build a new architecture to launch and manage all new Digital Services with an OTT approach, not touching the legacy IT stack used for broadband activation and being able to expose the new services to clients and partners regardless of their access provider

.. AND IT'S JOURNEY IN DIGITAL SERVICE ..

- Consumers are demanding and asking for **more personalized and real time services** from telcos, to be accessible at any given time, and wherever they are.
- **Delivering a great customer experience** starts with provisioning lead time and service-to-launch time.
- That is why **TM Brazil** is focusing on transitioning to a new approach for service design and launch with an OTT approach.

...AND, HOW TOGETHER WE ARE DRAWING THE WAY...

- Implementation of a **Real Time Service Orchestrator solution** supporting the **introduction of new services as an OTT approach** not touching the broadband stack
- **Easily deployable solution** beside the existing legacy OSS, **fully customizable** to suit operators requirements, proven **with Agile development cycles and DevOps**
- **Low Delivery Risk:** proven for Tier 1 volumes and packaged with a number of pre-implemented industry-specific processes
- **Reduced upfront investment** (pay-for-outcome model) and extremely **low TCO**

..TO DRIVE BUSINESS RESULTS

- **Single solution exposing access-independent Service design**
- **-60% in Service roll-out costs**
- **-50% in Time to market**
- **-30% in Activation Order Lead Time**

RT OSS

ANALYTICS/
DEPLOYMENT

Within the Analytic portfolio Asset designed and developed by ICOE Comms based in Milan, which also empowers:

- Network deployment processes optimization (Digital Network Deployment - NIP)
- NOC/SOC and Customer Experience Management with both simplified troubleshooting and automated operations through rules based engine and RPA-robotic process automation (NIP)

Accenture has developed and delivered the Predictive Assurance solution provides the ability to automatically analyze huge amount of data, recognize patterns, learn from previous results, to proactively identify the performance of the service as perceived by Customers in real time

THE CHALLENGE:

- As never before, consumers are demanding and asking for more personalized and real interaction from companies, at any given time, and wherever they are.
- Delivering a great customer experience starts with quality of communication services and with addressing network-related customer expectations.
- Many CSPs are now focusing on transitioning from a reactive care scenario to a proactive

BENEFITS/OUTCOMES:

The benefit deriving from the introduction of the Predictive assurance program has been calculated in 10% saving per year.

CALL MANAGEMENT

10% Reduction of handling time
15% Reduction of customer complain
18% Reduction of second level trouble ticket creation

CPE SWAP

10% No Fault Found reduction after CPE
CUSTOMER EXPERIENCE
NPS improvement & Churn prevention thanks to proactive actions and to enhanced reactive caring

VALUE PROPOSITION:

- The Predictive Assurance patented solution is an Accenture project that industrialize an AI POC experience in Trouble Ticket prediction and will pave the way for new opportunities across CMT, giving Accenture the ability to really demonstrate customer claim prediction and reduction.
- Scalable Solution to other domains (B2B, Mobile, etc.)
- Reusability Telco, Media, Over the Top players and commercial assistance
- As a Service approach enabled

VODAFONE PREDICTIVE CARE PROJECT STORY

APPLIED INTELLIGENCE TO CX MGMT

TELCO CLOUD (SDN / NFV)

AUTOMATION,
ORCHESTRATION &
ABSTRACTION

RT OSS

ANALYTICS/
DEPLOYMENT

WE PRESENT YOU VODAFONE ITALY...

- Vodafone is one of the major Global operators worldwide, with more than 500 M customers in Fixed / Mobile
- Vodafone Italy, is the second operator in fixed lines, with more than 2 M customers and facing a strong growth related to FTTx subscriptions
- The competition is fierce, and the battle is not only ongoing on the commercial part but also on improving the customer Experience

.. AND IT'S JOURNEY IN CX ..

- Consumers are demanding and asking for **more personalized and real interaction** from companies, at any given time, and wherever they are.
- **Delivering a great customer experience** starts with quality of communication services and with addressing network-related customer expectations.
- That is why **Vodafone Italy** is now focusing on transitioning from a reactive care scenario to a proactive care scenario.

...AND, HOW TOGETHER WE ARE DRAWING THE WAY...

- In the last two years we jointly performed **two proof of concept** on increasing customer base and to evaluate the ability to actually predict the customer claim on specific issue.
- Currently we are **industrializing, for the first time ever** in the telco market, an **AI based** customer claim prediction **solution**.
- The goal is to identify factors that are causing current problems or that are likely to cause future problems, and hence **enable preventive actions to mitigate impacts** on the end user.

..TO DRIVE BUSINESS RESULTS

- **Call Management**
 - 10% Reduction of handling time
 - 15% Reduction of customer complain
 - 18% Reduction of second level trouble ticket creation
- **Digital Experience**
 - 12% reduction of human chat
- **Cpe Swap**
 - 10% No Fault Found reduction
- **Customer Experience**
 - NPS improvement & Churn prevention

NOW REFLECT ON WHAT YOU JUST LEARNED ABOUT NETWORK PROGRAMMABLE PLATFORMS....

WHERE ARE WE NOW?

...THAT WILL TRANSFORM HOW CX WILL BE DONE

TELCO CLOUD (SDN / NFV)

AUTOMATION,
ORCHESTRATION &
ABSTRACTION

RT OSS

ANALYTICS/
DEPLOYMENT

TECHNOLOGY TRANSFORMATION

Hybrid architecture

The predictive platform is based on a unique combination of services distributed between Accenture cloud, for all the heavy-lifting computing power necessary, and client premise

Model automatic training

The solution is able to automatically retrain predictive models periodically to adapt and maintain high levels of accuracy without human intervention

As a Service solution

The Predictive Assurance solution requires little integration with Clients Premise, enabling fast integration and a pay as you go approach

OPERATING MODEL TRANSFORMATION

Automated Preventive Actions

The Predictive Assurance platform, through the predictive algorithms, will automatically assign a propensity to make a complaint for a specific reason. These scores will be used to automatically trigger workflows and automatic remote actions to mitigate issues before they become customer complaints

Assisted-care enhancement

Customer care agents will now be suggested by the Risk score integration, on how to act, saving time (ATH), wrong troubleshooting, and will require even less technical knowledge

EFFICIENCY

Based on the Poc we expect

- Cost Saving: **reduction of churn** and Trouble Ticket openings
- Customer Experience: **increase of client's satisfaction** focus on customer-centric Outcomes and Improvements
- Proactive support to Customer Care and Technical Customer Support: enable **to focus activity on recovery process governance**
